picoCTF :- FindAndOpen

Download the necessary resources they have given to solve this challenge.

U can't extract the flag.zip file because it needs a password.

U have a dump.pcap file too in the resource

First i opened wsl and used strings command

→ strings dump.pcap

This gives a lots of human readable information

Better to use wireshark in this case

If u see packets 1-9 says

Flying on Ethernet secret: Is the flag

Leave it .

Packets 10-22 are MDNS traffic

Leave it. It's basically noise.

Packets 23 onwards we have to look into it

Some say: iBwaWNvQ1RGe1Could the flag have been splitted?

Some say: PBwaWUvQ1RGesabababkjaASKBKSBACVVAVSDDSSSSDSKJBJS

Some say: try checking the other filePBwaWUvQ1RGe1Maybe

Just One says:

AABBHHPJGTFRLKVghpcyBpcyB0aGUgc2VjcmV0OiBwaWNvQ1RGe1IzNERJTkdTE9LZF8=
8=

Last one has = in last it is proolly base64 encoded

Use base64 decode command i.e

echo

"AABBHHPJGTFRLKVghpcyBpcyB0aGUgc2VjcmV0OiBwaWNvQ1RGe1IzNERJTkdTE9LZF8=" | base64 -d

It'll say wrong formatting

Use hit and trial method(just start to remove characters from the start one by one)

At last:

VGhpcyBpcyB0aGUgc2VjcmV00iBwaWNvQ1RGe1IzNERJTkdTE9LZF8=

This string is in a correct format and when decoded

We get:

This is the secret: picoCTF{R34DING_L0Kd_

This is the password to extract flag.zip file

Use this command to open

unzip flag.zip

Enter the password u got

Flag.txt is extracted open it there will be the whole flag which is
picoCTF{R34DING_L0Kd_fil56_succ3ss_419835ef}

done!!
